                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ঠ
                                                                                                                                                                                                                                                                                                                                                         Sequence 21, Application US/09500811
Patent No. 6323314
GENERAL INFORMATION:
APPLICANT: Qvist, Per
APPLICANT: Bonde, Martin
TITLE OF INVENTION: A Method for Assaying Collagen Fragments
TITLE OF INVENTION: Method and Use of the Method to Diagnose
TITLE OF INVENTION: Disorders Associated with the Metabolism
NUMBER OF ENURENCES: 21
CORRESPONDENCE ADDRESS: Darby & Darby PC
                                                                   CLASSIFICATION:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Total number of hits satisfying chosen parameters:
 Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being prand is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                           1270.5

EWS-fusion-proteins (EFPS) may play a role in the tumorigenic process. They may disturb gene expression by minicking, or interfering with the normal function of CTD-POLII within the transcription initiation complex. They may also contribute to an aberrant activation of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             are thought to arise via EFP-induced transcriptional deregulation, with the tumor phenotype specified by the EWSRI fusion partner and cell type. Transcriptional repression of the transforming growth factor beta type II receptor (TGF beta RII) is an important target of the EWS-FLI1, EWS-ERG, or EWS-ETV1 oncogene.

MISCELLANEOUS: Binds calmodulin in the presence, but not in the absence, of calcium ion.

SIMILARITY: Belongs to the RNP TET family.

SIMILARITY: Contains 1 RQ domain.

SIMILARITY: Contains 1 RANEP2-type zinc finger.

SIMILARITY: Contains 1 RANEP2-type zinc finger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    activation domain in EPPS. EWSR1 binds POLR2C but not POLR2E POLR2C, whereas the isolated EAD binds POLR2E and POLR2G but pot POLR2C. Cis-linked RNA-binding domain (RBD) can strongly and specifically repress trans-activation by the EAD.

PMM: Phosphorylated; calmodnlin-bindin--
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      involves EWSR1 and WT1.

DISEASE: Malignant melanoma of soft parts (MMSP), also know soft tissue clear cell sarcoma, is a rare tumor developing tendons and aponeuroses. It is associated with chromosomal translocation t(12;22)(q13;q12) involving EWSR1 and ATF-1.

DISEASE: Involved in small round cell sarcoma through a chromosomal translocation t(1;22)(p36.1;q12) that involves
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DISEASE: Ewing's sarcoma is characterized by chromosomal translocations t(1;22)(q24,q12) which involves EWSR1 and FLI1, t(7;22)(q22,q12) which involves EWSR1 and ETV1, t(21;22)(q22,q12) which involves EWSR1 and ERG and t(9;22)(q22-31;q11-12) which involves EWSR1 and ERG and t(9;22)(q22-31;q11-12) which involves EWSR1 and NR4A3.

DISEASE: Involved in desmoplastic small round cell tumor (DSRCT) through a chromosomal translocation t(11;22)(p13;q12) that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   which EWSR1 is fused to a variety of cellular transcription factors. RPPS are very potent transcriptional activators dependent on the EAD and a C-terminal DNA-binding domain contributed by the fusion partner. The spectrum of malignancies associated with EPPS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TISSUE SPECIFICITY: Ubiquitous.

-I- FUNCTION: Might function as a repressor (By similarity).
-I- SUBUNIT: Binds RNA, POLR2C, SF1 and calmodulin. Interacts with
                                                                                                                                                                                                        PTM: Phosphorylated; calmodulin-binding inhibits phosphorylation of Ser-266 (By similarity).

MISCELLANEOUS: Binds calmodulin in the presence, but not in the absence, of calcium ion (By similarity).

SIMILARITY: Belongs to the RNP TET family.

SIMILARITY: Contains 1 IQ domain.

SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  541
